SUBJECTS

Abdominal vagotomy of the pregnant rat, effect on LH and progesterone concentrations and fetal resorption 131–136
Acrosin, in mouse spermatozoa 75–76
Adenosine monophosphate, intrauterine injection, induction of implantation, in the mouse 7–8
Adenylate cyclase from ejaculated human spermatozoa, inhibitors of 59–61
Adrenergic nerves, intrauterine, loss of catecholamine fluorescence from, during pregnancy in the guineapig 51–58
Age-dependent changes in the hypothalamo–pituitary–ovarian axis of the laying hen 141–146
Albino locus of mouse, complementing genotypes, fertility studies 197–202
Albumin protection of mouse morulae and early blastocysts against toxic effects of cuprous and cupric ions during development in vitro 335–339
Amino acid aminotransferase, branched-chain, in mouse testicular tissue 117–123
Androstenedione, active immunization against, in ewes, effect on ovulation and lambing rates 129–130
Index

Arachidonic acid, effect on CL regression in the pseudopregnant rabbit 381–387

Birds, oviduct, motility: study with chronically implanted electrodes 217–221

Blastocysts
cow, scanning electron microscope study 9–12
mouse, early, albumin protection against toxic effects of cuprous and cupric ions during development in vitro 335–339
effect on, of human uterine flushings in vitro 137–140
rabbit, luteotrophic effect 331–333
preimplantation: studies in vitro of metabolism of neutral steroids and of origin of blastocyst oestrogen 297–304
regulatory enzymes of carbohydrates and energy metabolism 77–80

Boar, changes in serum testosterone concentrations, during development 377–380

Bull, sperm viability and concentration, relationship to serum-induced head-to-head agglutination 193–196

Calithrix jacchus, sexual development in: physical, hormonal and behavioural aspects 155–166

Carbohydrate metabolism, enzyme regulation of, in rabbit blastocyst 77–80

Castration, functional, relationship with alpha-fetoprotein produced by hepatoma-bearing female rats 39–44

Catecholamine fluorescence, loss of, from intrauterine adrenergic nerves during pregnancy in the guinea-pig 51–58

Cell proliferation, uterine, during early decidualization induced by oil, in mice 125–128

Cell-mediated immunity to spermatozoa, detection in mice and man by leucocyte adherence-inhibition test 277–283

Cervical mucus, movement of human spermatozoa in 259–265

Chloma counts and non-disjunction frequencies in normal ram and in rams carrying the Massey F (t1) Robertsonian translocation 353–356

CL regulation in the pseudopregnant rabbit and effects of treatment with prostaglandin F-2a and arachidonic acid 381–387

Cow
active immunization against oestradiol-17β 173–178
blastocysts, scanning electron microscope study in vitro 9–12
dairy: effect of progesterone-releasing intravaginal device on milk progesterone levels, vaginal flora, milk yield and fertility 289–290

Cryogenic preservation of fish and mammalian spermatozoa 13–18

Cuprous and cupric ions, toxic effects on mouse morulae and early blastocysts during development in vitro: albumin protection 335–339

Cytological and morphogenetic effects of acute X-irradiation of preimplantation mouse embryos cultured in vitro 399–402

Decidualization, early, oil-induced, in mice, uterine DNA synthesis and cell proliferation during 125–128

Dehydrogenase isoenzymes, lactate, during gonadogenesis in the rat 285–288

Dithiothreitol, improvement of visibility of F body in human Y-bearing spermatozoa 403–405

DNA synthesis, uterine, during early decidualization induced by oil, in mice 125–128

Domestic fowl, Gallus domesticus. See Hen

Electrical activity of oviduct of laying hen during egg transport 223–230

Electrodes, chronic implantation, study of avian oviductal motility 217–221

Embryo, preimplantation, mouse, cultured in vitro, acute X-irradiation of: cytological and morphogenetic effects 399–402

Energy metabolism, enzyme regulation of, in rabbit blastocyst 77–80

Enzymes, regulation of carbohydrate and energy metabolism in rabbit blastocyst 77–80

F body in human Y-bearing spermatozoa, improvement of visibility of, with dithiothreitol 403–405

Fertility of dairy cow, effect of progesterone-releasing intravaginal device 289–296

studies of complementing genotypes at the albino locus of the mouse 197–202

α-Fetoprotein produced by hepatoma-bearing female rats, relationship with functional castration 39–44

Fetus
mouse, with sporadic malformations, elimination by spontaneous resorption, in pregnancies of older females 407–410
resorption in the pregnant rat, effect of abdominal vagotomy 131–136
survival, effect of oestrogen, in the rabbit 237–239
weight, in the mouse: absence of effect of maternal immunization to paternal antigens 81–84

Fish spermatozoa, cryogenic preservation of 13–18

Follicle, postovulatory, of the domestic fowl, Gallus domesticus, steroid hormones in 103–107

Follicle-stimulating hormone, 125I-labelled, binding, in mouse testis in vitro 249–254

plasma, temporal relationship with plasma LH, in the ram 31–37

Freezing and thawing of human spermatozoa, ultrastructural injury caused by 389–394

Gonadogenesis, lactate dehydrogenase isoenzyme patterns in, in the rat 285–288

Gonadotrophins
human chorionic, role in pregnancy, in the rat 109–115
plasma, effect of active immunization against oestrogens, in the ewe 241–248
pregnant mares' serum, role in pregnancy, in the rat 109–115

preovulatory secretion in cyclic rats with small lesions in the preoptic area 85–89

Gorilla, oestrogen and testosterone excretion during pregnancy 231–236
Guinea-pig, loss of catecholamine fluorescence from intraterine adrenergic nerves during pregnancy 51–58
male, peripheral metabolism of testosterone during puberty 273–276

Hamster, influence of testis on fertilizing life of spermatozoa in the ligated vas deferens 147–153
hCG. See Gonadotrophins, human chorionic

Hen
laying, electrical activity of oviduct during egg transport 223–230
laying, hypothalamo–pituitary–ovarian axis, age-dependent changes in 141–146
oviposition by, role of prostaglandins 71–74
post-ovulatory follicle, steroid hormones 103–107

Hepatoma-bearing female rats, α-fetoprotein produced by, relationship with functional castration 39–44

Hexoses, effect on sperm capacitation and penetration of rat eggs in vitro 267–271

Histamine, role in implantation in the rabbit 23–26

Hyperaemia, uterine, oestrogen-induced, modification by drugs, in the ovariectomized rat 91–97

Hypothalamo–pituitary–ovarian axis of the laying hen, age-dependent changes in 141–146

Immunization, maternal, to paternal antigens, absence of effect on placental weight, fetal weight and litter size, in the mouse 81–84

Implantation in the mouse, induction by intraterine injection of adenosine monophosphate 7–8
in the rabbit, role of histamine 23–26

Inulin space, post-ovulatory changes, in rabbit oviduct 349–351

Lambing rates and ovulation in ewes actively immunized against androstenedione 129–130
Leucocyte adherence-inhibition test, of cell-mediated immunity to spermatozoa in mouse and man 277–283

Litter size in the mouse, absence of effect of maternal immunization to paternal antigens 81–84

Lung, rabbit, uteroglobin-like protein, characteristics 305–314

Luteinizing hormone
effect of abdominal vagotomy, in the pregnant rat 131–136
plasma, in rams, effects of sexual stimulation 67–70
plasma, temporal relationship with plasma FSH, in the ram 31–37
synthetic, response of oestrogen-immunized ewe 241–248

Luteotropic effect of the rabbit blastocyst 331–333

Malformations, sporadic, of fetal mice: elimination by spontaneous resorption, in pregnancies of older females 407–410

Mammals, spermatozoa, cryogenic preservation of 13–18

Man
cell-mediated immunity to spermatozoa, detection by leucocyte adherence-inhibition test 277–283

seminiferous tubules, spermatogenic stages, identification 255–257
spermatozoa, metabolism and motility in presence of steroid hormones and synthetic progestagens 315–322
ultrastructural injury after freezing and thawing 389–394
unusual abnormality of 341–342
Y-bearing, F body, improvement of visibility of, with dithiothreitol 403–405
uterine flushings, protein patterns 343–348

Mare, oestrous cycle, peripheral plasma testosterone and progesterone during 1–5

Marmoset monkey, Callithrix jacchus, sexual development in: physical, hormonal and behavioural aspects 155–166

Massey I (t1) Robertsonian translocation, rams carrying: chiasma counts and non-disjunction frequencies 353–356

Meiotic maturation, spontaneous, of mouse oocytes: effects of progesterone and oestradiol-17β 99–101

Milk progesterone levels and yield, of dairy cow, effect of progesterone-releasing intravaginal device 289–296

Morphogenetic and cytological effects of acute X-irradiation of preimplantation mouse embryos cultured in vitro 399–402

Morulae, mouse, albumin protection against toxic effects of cuprous and cupric ions during development in vitro 335–339

Mouse
albino locus, complementing genotypes, fertility studies 197–202
blastocysts, effect of human uterine flushings in vitro 137–140
cell-mediated immunity to spermatozoa, detection by leucocyte adherence-inhibition test 277–283
fetus, with sporadic malformations, elimination by spontaneous resorption, in pregnancies of older females 407–410
implantation, induction by intraterine injection of adenosine monophosphate 7–8
maternal immunization to paternal antigens, absence of effect on placental weight, fetal weight and litter size 81–84
morulae and early blastocysts, albumin protection against toxic effects of cuprous and cupric ions during development in vitro 335–339
oocytes, spontaneous meiotic maturation: effects of progesterone and oestradiol-17β 99–101
ova, effect of zinc ions on fertilization, in vitro 179–183
spermatozoa, acrosin in 75–76
testis, binding of 125I-labelled FSH in vitro 249–254
tissue, branched-chain amino acid aminotransferase in 117–123
uterine DNA synthesis and cell proliferation during early decidualization induced by oil 125–128
X-irradiation, acute, of preimplantation embryos, cultured in vitro, cytological and morphogenetic effects 399–402

Non-disjunction frequencies in normal ram and in rams carrying the Massey I (t1) Robertsonian translocation 353–356
Oestradiol
-17β, active immunization against, in the cow 173–178
effect on spontaneous meiotic maturation of mouse
oocytes 99–101
benzoate, effect on sexual behaviour of ovariectomized
ewe 203–208
plasma levels in sheep during oestrous cycle 167–171

Oestrogen
blastocyst, origin, studies by preimplantation rabbit
blastocysts in vitro 297–304
effect on fetal survival in the rabbit 237–239
excretion during pregnancy in a gorilla, Gorilla
gorilla 231–236
exogenous, oestrous and ovarian responses in pre-
pubertal ewe lambs in relation to the fecundity of
their dams 323–330
immunization against, effect on plasma gonado-
trophins in the ewe 241–248
-induced uterine hyperaemia, modification by drugs,
in the ovariectomized rat 91–97
synthetic, response to, in oestrogen-immunized ewe
241–248

Oestrous and ovarian responses to exogenous proges-
terone and oestrogen in prepubertal ewe lambs in
relation to the fecundity of their dams 323–330

Oestrous cycle
mare, peripheral plasma testosterone and proges-
terone during 1–5
rat, effects of RMI 12,936 (antiprogesterational steroid)
363–368
sheep, plasma oestradiol levels during 167–171
Oil-induced early decidualization, in mice: uterine DNA
synthesis and cell proliferation during 125–128
Oocytes, mouse, spontaneous meiotic maturation: effects
of progesterone and oestraediol-17β 99–101

Ovariectomized ewe, sexual behaviour responses to
progesterone benzoate and their persistent reduction
after exposure to phyto-oestrogens 203–208

Ovary
ewe, oviolatory and steroidogenic activities of left and
right ovaries, comparison 27–30
micropolycystic, human, ultrastructural study 19–21
responses to exogenous progesterone and oestrogen in
prepubertal ewe lambs in relation to the fecundity of
their dams 323–330

Oviduct
avian, motility, study with chronically implanted
electrodes 217–221
of laying hen, electrical activity during egg transport
223–230
rabbit, water content and inulin space, post-oviolatory
changes 349–351

Oviposition, hen, role of prostaglandins 71–74

Ovulation and lambing rates in ewes actively immunized
against androstenedione 129–130
rat, effects of RMI 12,936 (antiprogesterational steroid) 363–368

Ovulatory activity of left and right ovaries of the ewe
27–30

Ovum, mouse, fertilization in vitro, effect of zinc ions
179–183
rat, sperm penetration in vitro: effect of various
hexoses 267–271

Phospholipids, exogenous, association with spermatozoa
357–362
Phyto-oestrogens, reduction of sexual behaviour re-
sponses of ovariectomized ewe 203–208
Pig, a reciprocal translocation in 395–398
Placenta, weight, in the mouse: absence of effect of
maternal immunization to paternal antigens 81–84
PMSG. See Gonadotrophins, pregnant mares’ serum
Possum, brush-tailed, Trichosurus vulpecula, prostatic
function in 369–375
Pregnancy in the guinea pig, loss of catecholamine
fluorescence from intrauterine adrenergic nerves
51–58
in a gorilla, Gorilla gorilla, oestrogen and testosterone
excretion during 231–236
in the rat, role of PMSG and hCG 109–115

Progestagen: RMI 12,936 (antiprogesterational steroid),
effects on oestrous cycle and ovulation in the rat
363–368
synthetic, metabolism and motility of human sperma-
toza in presence of 315–322

Progestosterone
effect of abdominal vagotomy, in the pregnant rat
131–136
effect of progesterone-releasing intravaginal device on
milk progesterone levels, vaginal flora, milk yield
and fertility of cyclic and non-cyclic dairy cows
289–296
effect on spontaneous meiotic maturation of mouse
oocytes 99–101
exogenous, oestrous and ovarian responses in pre-
pubertal ewe lambs in relation to the fecundity of
their dams 323–330
milk levels, in dairy cow, effect of progesterone-
releasing intravaginal device 289–296
peripheral plasma, during oestrous cycle of the mare
1–5

Prostaglandins
F-2α, effect on CL regression in the pseudopregnant
rabbit 381–387
role in oviposition by the hen 71–74

Prostatic function in the brush-tailed possum, Trichosurus
vulpecula 369–375

Protein, of human uterine flushings at various stages of
menstrual cycle 343–348
uteroglobin-like, from rabbit lung, characteristics
305–314

Puberty in the male guinea-pig, peripheral metabolism of
progesterone during 273–276

Rabbit
blastocyst, luteotrophic effect 331–333
preimplantation, in vitro, studies on metabolism of
neutral steroids and of origin of blastocyst
ovestrone 297–304
regulatory enzymes of carbohydrate and energy
metabolism in 77–80
fetal survival, effect of oestradiol 237–239
implantation, role of histamine 23–26
lung, uteroglobin-like protein, characteristics 305–314
oviduct, water content and inulin space, post-ovi-
latory changes 349–351
Rat
cyclic, preovulatory secretion of gonadotrophins and TSH 85–89
eggs, sperm penetration in vitro: effect of various hexoses 267–271
hepatoma-bearing female, α-fetoprotein produced by, relationship with functional castration 39–44
lactate dehydrogenase enzyme patterns during gonadogenesis 285–288
oestrous cycle and ovulation, effects of RMI 12,936 (antiprogestational steroid) 363–368
ovariectomized, modification of oestrogen-induced uterine hyperaemia by drugs 91–97
pregnancy in, role of abdominal vagotomy on LH and progesterone concentrations and fetal resorption 131–136
role of PMSG and hCG 109–115
urine of female, odour of, effect on plasma testosterone concentrations in the male 63–65
Relaxin, target tissues for, identified in vitro with 125I-labelled porcine relaxin 209–216
RMI 12,936 (antiprogestational steroid), effects on oestrous cycle and ovulation in the rat 363–368

Seminiferous tubules, living in man, identification of spermatogenic stages in 255–257
Sex tissues, accessory, growth of, and inhibition of testosterone 5α-reductase activity, in castrated male mice 45–50
Sexual
behaviour responses of ovariectomized ewe to oestradiol benzoate, and their persistent reduction after exposure to phyto-oestrogens 203–208
development in the marmoset monkey, Callithrix jacchus: physical, hormonal and behavioural aspects 155–166
stimulation, effects on plasma levels of LH and testosterone in rams from high- and low-fertility flocks 67–70

Sheep
chiasma counts and non-disjunction frequencies in a normal ram and in rams carrying the Massey I (t1) Robertsonian translocation 353–356
effects of sexual stimulation on plasma LH and testosterone in rams from high- and low-fertility flocks 67–70
oestrogen immunization, effect on plasma gonadotrophins, and response to synthetic oestrogen or LH 241–248
oestrous and ovarian responses to exogenous progesterone and oestradiol in prepubertal ewe lambs in relation to the fecundity of their dams 323–330
ovaries, left and right, comparison of ovulatory and steroidogenic activities 27–30
ovulation and lambing rates in ewes actively immunized against androstenedione 129–130
plasma oestradiol levels, during oestrous cycle 167–171
sexual behaviour responses of ovariectomized ewe, and their persistent reduction after exposure to phyto-oestrogens 203–208
temporal relationship between plasma levels of FSH and LH in the ram 31–37
Spermatogenic stages in living seminiferous tubules of man, identification 255–257
Spermatoozoa
association with exogenous phospholipids 357–362
bovine, relationship of sperm viability and concentration to serum-induced head-to-head agglutination 193–196
capacitation, and penetration of rat eggs in vitro, effect of hexoses 267–271
cell-mediated immunity to, in mice and man: detection by leucocyte adherence-inhibition test 277–283
fish and mammalian, cryogenic preservation of 13–18
hamster, in the ligated vas deferens: influence of testis on fertilizing life 147–153
human, abnormality, unusual 341–342
ejaculated, inhibitors of adenylate cyclase from 59–61
metabolism and motility in presence of steroid hormones and synthetic progestagens 315–322
movement in cervical mucus 259–265
ultrastructural injury after freezing and thawing 389–394
Y-bearing, F body, improvement of visibility of, with dithiothreitol 403–405
mouse, acrosin in 75–76
Steroid hormones
in postovulatory follicle of the domestic fowl, Gallus domesticus 103–107
metabolism and motility of human spermatozoa in presence of 315–322
neutral, metabolism, studies by preimplantation rabbit blastocysts 297–304
Steroidogenic activity of left and right ovaries of the ewe 27–30
Testis
influence on fertilizing life of spermatozoa in ligated vas deferens of the hamster 147–153
mouse, binding of 125I-labelled FSH in vitro 249–254
mouse, tissue, branched-chain amino acid aminotransferase in 117–123
Testosterone
excretion during pregnancy in a gorilla, Gorilla gorilla 231–236
peripheral metabolism during puberty in male guinea-pig 273–276
peripheral plasma, during oestrous cycle of the mare 1–5
plasma, in male rat, effect of odour of female rat urine on 63–65
plasma, in rams, effects of sexual stimulation 67–70
5α-reductase, inhibition, and growth of accessory sex tissues, in castrated male mice 45–50
serum concentrations, changes during development, in the male pig 377–380
Thyroid-stimulating hormone, preovulatory secretion in cyclic rats with small lesions in the preoptic area 85–89
Translocation, reciprocal, in the pig 395–398
| **Trichosurus vulpecula**, prostatic function in 369–375 |
| Ultrastructural injury to human spermatozoa after freezing and thawing 389–394 |
| Urine of female rat, odour of, effect on plasma testosterone concentrations in the male 63–65 |
| Uteroglobin-like protein from rabbit lung, characteristics 305–314 |
| **Uterus** |
| DNA synthesis and cell proliferation during early decidualization induced by oil, in mice 125–128 |
| flushings, human, effect on mouse blastocysts *in vitro* 137–140 |
| hyperaemia, oestrogen-induced, drug modification, in the ovariectomized rat 91–97 |
| **Vaginal flora of dairy cow, effect of progesterone-releasing intravaginal device 289–296** |
| **Vagotomy, abdominal, of the pregnant rat, effect on LH and progesterone concentrations and fetal resorption 131–136** |
| **Water content of rabbit oviduct, post-ovulatory changes 349–351** |
| **X-irradiation, acute, of preimplantation mouse embryos cultured *in vitro*, cytological and morphogenetic effects 399–402** |
| **Zinc ions, effect on fertilization of mouse ova *in vitro* 179–183** |
COUNCIL OF MANAGEMENT

G. E. LAMMING* (Chairman)

C. E. ADAMS
W. R. ALLEN
D. T. BAIRD
R. A. BEATTY
J. R. CLARKE
I. D. COOKE
B. T. DONOVAN
H. M. DOTT*
J. EDWARDS

G. M. H. WAITES*

*Member of the Executive Committee

Secretary: M. A. HERBERTSON

Under its Memorandum of Association the Journals of Reproduction and Fertility (Limited by Guarantee) must apply all its resources towards the promotion of this or similar journals or of knowledge relevant thereto.

Editorial and Registered Office:
Journal of Reproduction and Fertility, 7 Downing Place, Cambridge CB2 3EL, U.K.

The Journal of Reproduction and Fertility is published every 2 months, two issues forming one volume. The subscription rate for 1978 is £70.00 (US $150.00) per annum, post free, by surface mail to overseas addresses. The price for single issues is £14.00 (US $30.00). The agent for distribution is the Biochemical Society Book Depot and all correspondence and remittances relating to subscriptions, back numbers (including the cumulative index), supplements and offprints should be sent to a bookseller or direct to:
Journal of Reproduction and Fertility, P.O. Box 32, Commerce Way, Colchester CO2 8HP, U.K.

Second-class postage paid at New York, N.Y. 10022, U.S.A.

© 1978 by the Journals of Reproduction and Fertility Ltd.
NOTICE TO CONTRIBUTORS

The Journal of Reproduction and Fertility publishes original papers, abstracts of Proceedings, and reviews and bibliographies on the morphology, physiology, biochemistry and pathology of reproduction in man and other animals, and on the biological, medical and veterinary problems of fertility and lactation. Clinical subjects are welcome. The Journal is covered by Current Contents, Biological Abstracts and Bibliography of Reproduction.

Papers are considered for publication on the understanding that they have not been, and will not be, published elsewhere in whole or in part, and that, where customary, they have been approved for publication by the relevant Head of Department. All papers are assessed by at least two referees. The Editor is not responsible for any loss of or damage to manuscripts or illustrations and the decision on all editorial matters is final. The date of receipt of each paper is normally the date on which the typescript is first received by the Editor but, if a paper has been extensively altered after submission, the date may be changed at the discretion of the Editor to that on which an acceptable draft is received. The Editor reserves the right to make minor literary emendations in the final editing.

Manuscripts (two copies only—one top copy and one duplicate) should be sent to the Editor, Journal of Reproduction and Fertility, 7 Downing Place, Cambridge CB2 3EL, England; the copies of the manuscript will not be returned if a paper is rejected unless a specific request for the return of the top copy only has been made at the time of submission. Manuscripts should be type-written, on one side of the paper only, with wide margins, be double-spaced and in the English language. Spelling should follow that of the Concise Oxford Dictionary. On a separate page the manuscript should bear the title of the paper, the names of the authors, the name of the Institution where the work was done and the present postal address if different from that of the Institution. A short title, to serve as a running head and consisting of not more than fifty (50) letters (including spaces), must also be given on the title page. The paper should normally be presented in the form of Summary, Introduction, Materials and Methods, Results and Discussion sections. The Summary should not exceed 3% of the length of the paper. Acknowledgments should be made at the end of the text in a separate section. Footnotes are generally not admissible except to indicate the present address of the author. If authors’ own papers are quoted as ‘in press’ in the bibliography, two copies of such papers must be provided so that the referees can properly assess the paper submitted. Descriptions of assays should contain enough details (e.g. standards, antisera, specificity, sensitivity, extraction efficiency, variation) for a reader to judge the validity of the assay without reference to other papers. All quantitative results should be analysed by appropriate statistical methods.

Journal practice in the use of terminology, abbreviations, formulae and symbols will, in general, follow that set out in Units, Symbols and Abbreviations—A Guide for Biological and Medical Editors and Authors published (1977) by the Royal Society of Medicine. For specifically chemical terminology, the Biochemical Journal’s ‘Instructions to authors’ should be consulted. Fuller information is readily available on application to the Editor.

References in the text should be given in the manner that is standard in the Journal, i.e. for multi-author papers, authors’ names to be given in full the first time they are quoted (unless more than 5 authors) and thereafter as et al. In the list of references the order should be alphabetical with papers by the same author being arranged in the order (1) single author, (2) two authors alphabetically according to the name of the second author, and (3) several authors chronologically with
a, b, c etc. for papers published in the same year. Titles of journals should be abbreviated according to the *World List of Scientific Periodicals*, 4th edn (1964), and as also given in *World Medical Periodicals*. First and last page numbers must be given.

Tables should be typed on separate sheets, be given Arabic numbers and be accompanied by adequate headings and legends. Their approximate position in the text should be indicated by a note in the margin. When at all possible, data should be presented as tables, which are more informative and generally more economic than text-figures.

Illustrations and diagrams (the originals and 2 copies) should be larger than the size of the finished block but not more than 30 × 20 cm overall and should bear the authors’ names and figure numbers on the back. Half-tone illustrations should be submitted *unmounted* and accompanied by a suggested lay-out of each Plate. Colour illustrations may be accepted. Authors will be charged for part or all of the cost of all plates, monochrome and colour. Line drawings should be made in India ink on plain white paper, tracing paper, Bristol Board or faint blue-lined paper. Letters and numbers should be written lightly in pencil. Line drawings and graphs to be included in the text must be numbered as Text-figures, separately from half-tone Plate figures. Descriptions of the illustrations and diagrams should be typed on a separate sheet.

Proofs will be sent to contributors for minor corrections. Major alterations will be accepted only at the author’s expense. Manuscripts will not be sent out with proofs unless requested in advance by the author. Overseas contributors will receive, and should return, their proofs by air mail.

Offprints. Regardless of the number of authors, only 50 offprints will be supplied free of charge. Additional copies up to the limit of 500 may be purchased if ordered on the form enclosed with the proofs. Offprints are despatched according to instructions from the author completing this form.

From January 1978 papers processed for publication in JRF will not be distinguished as full-length or brief communications. All papers submitted must include a summary and should preferably be arranged according to the normal section headings. Adherence to Journal format will expedite editorial processing.
